**Subject Code: 2110011 Subject Name: Physics** 

Date:30/05/2017

## **GUJARAT TECHNOLOGICAL UNIVERSITY**

BE- SEMESTER  $1^{st}$  /  $2^{nd}$  EXAMINATION (NEW SYLLABUS) - SUMMER - 2017

| Time: 2:30 PM to 05:00 PM |            |  | <b>Total Marks: 70</b>                  |                  |
|---------------------------|------------|--|---|------------------|
| Instr                     | uction     |  |   |                  |
|                           |            |  | Attempt any four out of remaining       | g Six questions. |
|                           |            | Make suitable assumptions wh             |   |                  |
|                           | 3.         | Figures to the right indicate fu         | m marks.                                |                  |
| Q.1                       |            | <b>Objective Question (MCQ</b>           | ))                                      | MARKS            |
|                           | (a)        | · ·                                      | •                                       | 07               |
|                           | 1.         | The magnetic susceptibility              | is equals to                            | •                |
|                           | _,         |  |   |                  |
|                           |            | (a) $\chi = mH$ (b) (c) $\chi = m/H$ (d) | $(1) \gamma = mB/H$                     |                  |
|                           | 2.         | The internal or Lorentz field            |   |                  |
|                           | _,         | (a) $E_i = E + E_c$ (b)                  | <del>-</del>                            |                  |
|                           |            | (c) $E = E + (P^2/3\varepsilon_0)$ (d)   | ) $E_1 = E + (P/3\epsilon_0)$           |                  |
|                           | 3.         |  | level for the threshold of pain.        |                  |
|                           |            |  | ) 120 dB                                |                  |
|                           |            |  | ) 10 <sup>-12</sup> dB                  |                  |
|                           | 4.         |  | btained from material.                  |                  |
|                           |            | 0  | o) Pera                                 |                  |
|                           |            | ` '                                      | l) Ferri                                |                  |
|                           | 5.         | ` '                                      | um drops to zero at K                   |                  |
|                           | ٥.         | · · · · · · · · · · · · · · · · · · ·    | b) 4.2 K                                |                  |
|                           |            |  | d) 0 K                                  |                  |
|                           | 6.         |  | agnetic materials are used in           |                  |
|                           | •          | (a) transformer cores (                  | •                                       |                  |
|                           |            | (c) microphones (                        | ` '                                     |                  |
|                           | 7.         |  | s to synthesize Metallic Glass          |                  |
|                           | , •        | (a) ball milling                         | <del>-</del>                            |                  |

| http://www.gujaratst | <b>6.</b><br>udy.c | The electronic polarization of a solid material which contains N number of atoms are  |    |
|----------------------|--------------------|---|----|
|                      | -                  | (a) $P_e = N \ 2 \pi \ \epsilon_0 \ R^3 \ E$ (b) $P_e = N \ \pi \ \epsilon_0 \ R^3 \ E$ (c) $P_e = N \ 4 \pi \ \epsilon_0 \ R^3 \ E$ (d) $P_e = N \ 4 \pi \ \epsilon_0 \ R^3$   |    |
|                      | 7.                 | According to Snell's law  |    |
|                      |                    | (a) $n_1/n_2 = \sin \varphi_1 / \sin \varphi_2$ (b) $n_1/n_2 = \sin \varphi_2 / \sin \varphi_1$   |    |
|                      |                    | (c) $n_1/n_2 = \sin \varphi_1 + \sin \varphi_2$ (d) $n_1/n_2 = \sin^2 \varphi_1 / \sin^2 \varphi_2$   |    |
| Q.2                  | (a)                | What do you understand by refractive index profile? Draw the sketch of step index & graded index fibers? Also give one example of each fiber in real world application.   | 03 |
|                      | <b>(b)</b>         | What is superconductivity? Compare Type-1 and Type-2 superconductors. Which of these two has wider application? Why?  | 04 |
|                      | (c)                | (i) Give difference between NDT and DT. Explain general objectives of NDT.  | 04 |
|                      |                    | (ii) In one of the quality testing lab ion slab with thickness 40 cm is tested with the help of ultrasound echo method. If the two passing pulses through specimen returns after 30 $\mu$ s and 80 $\mu$ s respectively Find the physical distance (depth) of the defect in specimen. | 03 |
| Q.3                  | (a)                | What is isotopic effect for superconducting material? The critical temperature for a metal with isotopic mass of 199.5 is 4.185 K. Calculate the isotopic mass if the critical temperature falls to 4.133 K.  | 03 |
|                      | <b>(b)</b>         | Explain briefly Polarization phenomenon and types of Polarization with definition and equation in dielectric material.  | 04 |
|                      | (c)                | Define bio material? Which characteristics are desirable in ideal bio materials? List out types and application of biomaterials in medical field.   | 07 |
| Q.4                  | (a)                | Define absorption coefficient and its unit.  A hall has a volume of 1,20,000 m <sup>3</sup> It has a reverberation time of 1.5 seconds. What is the average absorbing power of the surface if the total absorbing surface area is 25,000 m <sup>2</sup> ?                             | 03 |
|                      | <b>(b)</b>         | Explain with suitable examples applications of SMA in different fields.   | 04 |
|                      | (c)                | (i) What are ferromagnetic domains? Draw B-H curve for hard and soft ferromagnetic materials and define remnant and coercive fields on the curve.   | 04 |
|                      |                    | (ii) Give difference between soft and hard magnetic material. Also give their applications.   | 03 |
| Q.5                  | (a)                | Define numerical aperture for optical fiber and give its equation. Calculate the refractive indices of core and cladding materials of an optical fiber if its numerical aperture is 0.22 and relative refractive index difference is 0.012.   | 03 |
|                      | (b)                | If an Ultrasonic welding machine uses frequency 10 MHz. Explain with neat sketch diagram principle, working, merits and demerits of traducer which will be used to generate this high frequency.  | 04 |
|                      | <b>(c)</b>         | (i) Define Metallic Glasses. Give synthesis and applications of   | 04 |
|                      |                    | Metallic Glasses.  (ii) List out properties and application of CNT's.   | 03 |
| Q.6                  | (a)                | Magnetic field of 2 $\times$ 10 $^5$ A/m is applied to a paramagnetic material with relative permeability of 1.01 Calculate the value of B and M ( $\mu_0$ = 4 $\pi$ $\times$ 10 $^{-7}$ H/m)   | 03 |

| 1 /        | /             | •                     | 1        |

|-----|--|--|----|
|     |  | Briefly explain sole - gel techniques of preparing Nanomaterial and mention its advantage.   |    |
|     | (c)  | Explain basic component of laser generation. Also give types of  | 07 |
|     | laser. Give applications of laser in various fields. |  |    |
| Q.7 | (a)  | Define polar and nonpolar dielectric materials. Calculate electronic polarisability of argon atom given $\epsilon_r = 1.0024$ at NTP and N= $2.7 \times 10^{-25}$ atoms/m <sup>3</sup> ( $\epsilon_0 = 8.85 \times 10^{-12}$ F/ m) | 03 |
|     | <b>(b)</b>   | Explain Josephson Junction and its application. Also explain   | 04 |
|     |  | application of superconductor in Cryotron.   |    |
|     | (c)  | Describe the construction of fiber optical cable and compare the advantage of fiber optic cable over metallic cable.   | 07 |
